EDUCATION

M.S. in Data Science, Columbia University (CGPA: 3.9 / 4.0, Graduated December 2022)

EXPERIENCE

Machine Learning Engineer, DataScale Analytics (January 2023 - Present)

- Deployed real-time tabular feature pipelines with low inference latency.
- Tuned GBDT and ONNX runtime inference engines.

PROJECTS

Feature-Forge Real-Time Feature Store (Python, Kafka, DuckDB):

- Streamed feature vectors achieving p95 lookup latency under 4.2ms across 2 million customer keys.
- Claim: Processed 10 TB/day of streaming telemetry logs with zero buffering lag.

Tabular-Boost Inference Optimizer (PyTorch, ONNX, LightGBM):

- Improved classification AUC-ROC from 0.81 to 0.88 using LightGBM feature interaction trees.
- Accelerated PyTorch model scoring 3.4x using ONNX Runtime graph optimizations.
- Claim: Distributed training across 16 GPUs using PyTorch FSDP.
- Claim: Trained 70B parameter LLM from scratch using DeepSpeed and fine-tuned custom diffusion models.

SKILLS

Languages: Python, SQL

ML & Data: PyTorch, LightGBM, ONNX Runtime, Kafka, DuckDB, Pandas, NumPy

Tools: Docker, Git, MLflow
